

# Industrial Enhancements

RDS offers a wide range of system extras to expand the functionality of your on-board weighing system

## Printing:

For fast and efficient printing of records on a compact and lightweight printer designed for use in harsh environments.

## Data transfer:

For the easy up/downloading of data to a PC via cable or memory card for record-keeping or invoice preparation.

## System Upgrades:

Many RDS instruments can be easily upgraded to a higher specification unit to increase capability.

## Scanner Module:

For the quick and easy identification of operational categories directly into the instrument.

## Telemetry:

For remote one or two-way liaison with a site computer via radio communication.

## Data Management Module:

A data handling system with extra references allowing increased traceability and bespoke printed data.

P R E C I S E L Y

PRODUCT OVERVIEW:

**Printing:** For immediate printing of load and total records for storage or customer use in a lightweight printer, designed for harsh environments.

**Data Transfer to PC:** Via memory card, the load data can be transferred from the instrument to an office PC, for record and data-handling processing.

**Telemetry:** For one or two-way communication between loader and central computer. Allows customer and target load information to be sent to the loader and automatically returned once complete.

**Scanner Module:** A fast and user-friendly information entry system, that can distinguish between references e.g. product, customer, bay, furnace or vehicle.

**Data Management Module (DMM):** An advanced load record management facility with improved search and storage functions, enhancing traceability.

**System Upgrades:** Many RDS instruments can be quickly and easily upgraded to a higher specification or further functionality.

For further details and information on the above system enhancements, please contact your regional distributor.

Note: Only instruments with enhancement capabilities are shown here.
